

Holt Area Partnership – summary notes on Health Check (from 2009-2010 Business Plan)

The Health Check was carried out in the autumn of 2007. 7835 leaflets were distributed and 1057 were returned giving a response rate of 13.4%, at a cost of £3687.

Whilst not statistically robust or carried out professionally the results give indicators of where the partnership should be concentrating efforts. Unfortunately as can be seen from the high priority responses there are no “quick wins” to be gained, nevertheless the partnership has decided to explore some of these issues with other NNCP partners.

At the same time local needs evolve and some of the partnership’s activities are based on requests from local groups not shown above.

HIGH PRIORITY
